

New Balcony Glazed Enclosure

Why a Balcony Glass?

Just to still enjoy the views of the Mediterranean Sea on those windy days. Wind around seacoasts could be severe sometimes. If that occurs, you just simply need to close the glass.

A glazed balcony allows us to enjoy, regardless of the weather, and throughout the year, a sunny breakfast in the early spring, a calming cup of tea cuddled up in your favorite armchair watching the rain come down, a romantic candle-lit dinner on an autumn evening, etc., just a few of the infinite possibilities a space like this can offer

It keeps rain, snow, wind, dust, and birds away from the balcony without reducing the amount of light that you receive. And you can still enjoy the views on the Mediterranean Sea.

Imagine enjoying breakfast on our balcony without chilly winds, or hosting a dinner party outside with your friends even when it's raining.

A closed balcony is a safe place for children to play and also for pets (cats, guinea pigs, poodles, ...) Running away is not possible. Besides, we also save money on our energy bill. Multiple studies on balcony enclosures show that creating a solarium reduces your overall energy consumption significantly.

Fully Retractable

Retractable glass means that frameless retractable glass can be fully opened, the glass slides easily to fold against the wall and is easy to use. The glass panels open easily with a handle that is similar to the handle of a car door. Once this has been opened, the glass slides easily to fold against the wall. All of the glass panes can be turned aside, or some can be left open for partial protection. When all of the glass panes have been turned aside, they can be locked to prevent them from moving and clattering in the wind

How to open/close

Please, check the following videos:

<https://youtu.be/MRYoYxIWta8> Opening simulation of the terrace glazed enclosure

<https://youtu.be/nuQVUZWMXDw> Example of cleaning and opening the terrace glazed enclosure

You can also see these videos on our website:

www.rentlamanga.heliohost.org/new_glazed_enclosure.htm

Balcony with the glass panels closed

Balcony with the glass panels open

This is the way to place the glass panels

Pin to hold the glass panels (important)

Pin to hold the glass panels

Panels from areas A and B are placed in "SIDE 1"
Panels from area C are placed in "SIDE 2"
Fixed panel can't be moved
